Comparative analysis of proteins from exhaled breath condensate of lung cancer patients with gene expression level and proteins from the tumor tissue

Unlike many other types of tumors, there are no effective screening programs for lung cancer.

condensate (EBC) is a perspective method of early diagnostics of lung cancer. The process of EBC collection is non-invasive, easy to perform and may be repeated many times without any side effects.

To detect the similarity of EBC protein composition to that of lung cancer tissue.
